Instructions how to run the *demo* application

1. Download the lab 1 on Cyberlearn
2. Import the Maven project using your favorite IDE
3. Run the SearchFiles class from the index package

Using Luke

1. Download the release archive from the repository:
<https://github.com/DmitryKey/luke/releases/tag/luke-6.6.0>
2. Extract it and run Luke:
`cd luke-6.6.0/`
`./luke.sh` (respectively `.bat` on Windows)
3. Browse to the index directory you already have build
(`lucene-6.6.1/demo/src/java/index`) and see the results.
